DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to DNA sequences of chorismate mutase, host cells containing said sequences and a method for making a protein with chorismate mutase activity, classified in class 536, subclass 23.2 or 23.74.
- II. Claims 20-33, drawn to a process for the production of a phenylalanine and tyrosine auxotrophic yeast, and yeast produced by said process, classified in class 435, subclass 471 or 481.

Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. The DNA sequences encoding chorismate mutase activity, host cells containing said DNA sequences and process for producing proteins (Group I) are unrelated to the phenylalanine and tyrosine auxotrophic yeast strains and method of preparing said yeast strains (Group II). The compositions are unrelated in structure or function and the methods comprise different, unrelated steps, with each method directed to a different outcome. A search of one group would not be co-extensive with a search of the other group and hence said search would be burdensome.

Art Unit: 1636

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Thomas Sossong on May 29, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
